Example of a Mapping Document and How to Map against OFQUAL Qualifications

CPD and "Level" Terminology

The term 'Level' is used to identify a standard of skill or knowledge attained through completing a qualification. If you believe that your learning material is of the same standard as an Ofqual regulated qualification, then we would need you to provide evidence that identifies which elements of your course marries up with those learning outcomes that you are pitching your course against.

As CPD courses are shorter and smaller than a qualification we would not expect all learning outcomes or elements to be covered, although any learning outcomes that you do identify will need to be of the same standard as the qualification, to be legitimately use the term 'Level'.
Levels have now also been split into Award, Certificate and Diploma depending on the amount of information and skill demonstrated by the candidate, will ultimately determine the competency Level of the learner.

A Working Example: L3 Phlebotomy

For example, an Award in L3 Phlebotomy is merely and introduction to the service/treatment and would not require any prerequisites, other than the candidate be over 18. However, to obtain a Certificate or a Diploma then learners must already be working in the Healthcare professions where blood taking is required and they must also undertake specific assessments.
CPD courses are shorter and should not be used as a substitute to a qualification but to enhance or expand on skills and knowledge already obtained.

We have written out one unit standard in L3 Phlebotomy as an example.
You would need to go through each unit standard and create a chart such as the one we have given as an example to show us where the learning outcomes of your course match those of an Ofqual regulated qualification of the same Level. You must also number each of your learning outcomes throughout the learning material so that the assessor can see which learning outcomes you are referring to.

Example of a Mapping Document and How to Map against OFQUAL Qualifications

Unit Title:	Understanding Phlebotomy Skills and Techniques
Credit Value	3
Level	3
GLH	26
Ofqual Reg number:	This can be found on the qualification information
Assessment guide	Methods how the course will be assessed, eg, Questioning / labelling / practical demonstration

Learning Outcomes:	**Assessment Criteria:**	**How my learning outcomes marry up with this unit are:**	**My Assessment Guide that is similar to this unit are:**	**Explain in this column if your course meets the necessary Learning Outcome(s)**
The learner will be able to: 1. Understand & explain key terminology associated with phlebotomy	The Learner can competently: 1.1 Explain the key terminology associated with phlebotomy this can include but not limited to: venepuncture, cannula, torniquet, arteries, veins, capillaries, blood sample. 1.2 Identify the main steps in phlebotomy procedure, to include but not limited to: correct application and removal of torniquet, needle insertion, positioning of patient.	**1.1** Explain the key terminology associated with phlebotomy this can include but not limited to: venepuncture, cannula, torniquet, arteries, veins, capillaries, blood sample. Didactic / power point / manual.	**1.1** LO has been covered and evidenced by the following process: Page 5 of manual. Venepuncture, cannular torniquet are explained candidates are asked to identify and explain each one by completing the exercise on page 6. Page 7 of manual. Candidates are asked to label diagram of the arteries, veins and capillaries and define the differences. Page 9 of manual – explanation of blood sample given. Q&A students need to answer to show understanding.	Only assessment criteria of learning outcome 1.1 has been met, therefore this section does not meet the L3 criteria.

2. Understand the principles of informed patient consent, including paediatric consent	2.1 Explain the importance of gaining patient informed consent. 2.2 Explain the principles of informed patient consent.	2.1 Explain the importance of gaining patient informed consent. Manual / didactic / tutor facilitation 2.2 Explain the principles of informed patient consent. Manual / questioning Practical demonstration / candidate's role play / tutor Q&A to check learners' knowledge and understanding.	2.1 LO has been covered and evidenced by the following process: Page 14 of manual – explanation on informed consent is given. Candidates are to role play to ensure that they understand how to ask for this. Tutor facilitates. 2.2 LO has been covered and evidenced by the following process: Page 15 in learning material explains the principles of informed patient consent. Candidates are required to answer a question on gaining informed consent the principles relating to gaining informed consent	The assessment criteria for learning outcome 2.1 have been met This assessment criteria for learning outcome 2.2 have been met. The assessment criteria for this module have been met and therefore meets the L3 criteria.
3. Know and are familiar with current health and safety legislations and regulations as relevant to phlebotomy	3.1 Summarise how current H&S legislations and regulations impact on phlebotomy practices to include but not limited to: ✓ Health and Safety at Work Act 1974 ✓ Health and Safety (Sharp instruments in healthcare) Regulations 2013 ✓ Personal Protective Equipment 2022	3.1 Summarise how current H&S legislations and regulations impact on phlebotomy practices: Didactic / power point / class discussion/ training material.	3.1 Page 3 – 7 in training manual covers the following legislations: ✓ Health and Safety at Work Act 1974 ✓ Health and Safety (Sharp instruments in healthcare) Regulations 2013 ✓ Personal Protective Equipment 2022	The necessary legislations have been covered and therefore the assessment criteria for learning outcome 3.1 meets the L3 requirements.
4. Understand an organisations application of phlebotomy practices and procedures / how does this relate to the individuals place of work?	4.1 Explain how an organisation applies phlebotomy policies and procedures – How does this apply to your own organisation?	4.1 Explain how an organisation applies phlebotomy policies and procedures – How does this apply to your own organisation? Didactic / power point / training material.	4.1 Page 12 explains how phlebotomy practices and procedures are applied to aesthetic practices and treatments.	The assessment criteria for learning outcome 4.1 have been met and therefore meets the L3 criteria.

5. Understand the principles of infection control during venepuncture	5.2 Identify clinical steps for hand washing. 5.3 Explain importance of hand washing. 5.4 Explain additional sterilisation and sanitation methods used before during and after a phlebotomy procedure	5.2 Identify clinical steps for hand washing. 5.3 Explain importance of hand washing. 5.4 Explain additional sterilisation and sanitation methods used before during and after a phlebotomy procedure. video / training material / practical observation	5.2 & 5.3 Page 8 – image of hand washing to accompany the video. 5.4 Page 7 – 11 Explains the principles of safe working practices. Information covers necessary sterilisation and sanitation methods used before, during and after a phlebotomy treatment.	The assessment criteria for learning outcome 5.1 have not been met and therefore does not meet the L3 criteria. The assessment criteria for learning outcomes 5.2, 5.3 and 5.4 have been met. This module does not meet the L3 Lo's required.
6. Know how to recognise and respond to complications that can occur during a venepuncture procedure	6.1 Explain potential complications which could occur during a venepuncture procedure, to include but not limited to, haematoma, nerve damage, fainting, pain, and infection. 6.2 Explain how to respond to each complication			
7. Know and identify different types of torniquet	7.1 Identify two different types of torniquet. 7.2 For each torniquet identified state when and why it would be used			
8. Be able to demonstrate the correct application and release of a torniquet	8.1 Correctly apply a torniquet 8.2 Correctly remove a torniquet			
9. Be able to demonstrate taking blood from a dummy arm	9.1 Correctly using a needle in a dummy arm to obtain blood. 9.2 Correctly using equipment in accordance with H&S procedures and precautions			

The CPD Group

Example of a Mapping Document and How to Map against OFQUAL Qualifications

10. Know the actions to take if blood cannot be taken from a patient.	10.1 Explaining what actions to take if blood cannot be taken from a patient. 10.2 Explain when and where a patient should be referred. 10.3 Describe parameters of candidates own ability			
11. Know how to provide patient aftercare	11.1 Explain types of dressings which could be used on venepuncture sites. 11.2 Describe patient aftercare			
12. Know how to prepare and pack samples for transportation	12.1 Identify the information required for labels and other documentation. 12.2 Describe how to prepare and pack samples safely ready for transportation.
