THE LOOKING GLASS BEAUTY SCHOOL

A05 Lesson Plan

Based on The CPD Group lesson plan template. One taught day plus pre-course study and post-course case studies.

Liquid and Powder Acrylic Enhancement CPD Course | Course author: Jessica Jane Preston | Version 1.3, November 2026

Course details

Course title	Liquid and Powder Acrylic Enhancement CPD Course
Duration	19.5 hours of learner effort: 3 hours pre-course reading, 7.5 guided learning hours on the taught day (excluding breaks), about 9 hours for three post-course case studies.
Date	Delivered on demand; each cohort's date is recorded on the register.
Venue	The Looking Glass Beauty School, 4a Roushill, Shrewsbury, Shropshire.
Tutor / assessor	Jessica Jane Preston (VTCT Level 2 NVQ Diploma in Nail Services; Award in Education and Training).
Learners	Maximum four learners per tutor. Each learner brings a suitable adult model for the afternoon practical and assessment (confirmed at booking).
Entry requirements	Aged 18 or over; Level 2 Beauty Therapy, Nail Services or equivalent including manicure, nail structure and safe salon practice; no known acrylate or methacrylate sensitivity.
Resources	Learner manual A01 (printed and digital); one professional EMA liquid-and-powder system per workstation with its Safety Data Sheets, dappen dish, brush, primer and dehydrator; tips, adhesive and forms; 100/180, 180 and 240 files and buffers; lint-free wipes; acetone and wraps; local extraction at every station; Forms A to H; A02 to A04.

Health and safety

Room risk assessment and COSHH assessments for the system in use reviewed before the day; SDS available at each station. Source-capture extraction on for all filing and removal; dappen dishes lidded and bottles capped when not dispensing; monomer wipes in a lidded bin; nitrile gloves, eye protection and a blood-spill kit available; first aider identified; fire exits and assembly point explained at registration. Models complete Form A; no service on a contraindicated nail. Any warmth reported as product sets is managed as the manual directs and recorded.

Equal opportunity and reasonable adjustments

Learners declare support needs at booking or on the day. Available without changing the competence or safety standard: large-print and digital manual, coloured overlays, extra time for the theory paper, questions read aloud and oral answers recorded, one-to-one demonstration, breaks on request, a seated position and desk height adjusted to the learner. Content is delivered by demonstration, discussion, images and supervised practice as well as text.

Aim of the course

To enable qualified beauty and nail professionals to apply, maintain and remove liquid-and-powder acrylic enhancements on tips, forms and the natural nail safely and to a commercial standard, understanding the chemistry, the dust, vapour and allergy controls and the UK legal responsibilities that go with it.

Learner objectives (the ten learning outcomes from the manual, Chapter 1)

Obj. no.	Learner objective
LO1	Explain the purpose, benefits, limitations and client suitability of liquid-and-powder acrylic, and compare it with builder gel, hard gel and gel polish.
LO2	Identify the structures of the nail unit and recognise conditions that require an enhancement service to be adapted, postponed or refused.
LO3	Conduct and record a professional consultation, obtain informed consent and create an individual treatment plan for an enhancement client.
LO4	Explain monomer, polymer, initiator and catalyst, free-radical polymerisation, the mix ratio, set time and the difference between EMA and MMA products.
LO5	Select, handle, store and dispose of acrylic products and equipment in accordance with risk assessment, COSHH, manufacturer instructions and current UK requirements.
LO6	Control dust and vapour exposure and explain why acrylate overexposure causes sensitisation.
LO7	Prepare the natural nail for an enhancement without avoidable damage to the plate or living tissue.
LO8	Fit and blend a tip, or fit a sculpting form, achieving a sidewall-to-sidewall fit with no gaps.
LO9	Apply acrylic in zones with controlled bead consistency to build a balanced structure with a correctly placed apex, straight sidewalls and an even C-curve.
LO10	Refine, finish, infill, repair and safely remove an acrylic enhancement, and provide appropriate aftercare.

Pre-course (3 hours, home study)

Read manual Chapters 1 to 10; complete the four pre-course prompts in Chapter 20 (the Safety Data Sheets for the monomer and powder with the named monomer, hazard statements and storage requirements; a correct bead in the learner's own words; a side-view sketch marking the apex; three questions to bring). Handed in at registration and checked by oral questioning during the morning.

Taught day (09:00 to 17:30; 7.5 guided learning hours excluding a 30-minute lunch and two 15-minute breaks)

Time	Obj. no.	Content	Trainer activity	Learner activity	Resources	Assessment
09:00	—	Register, welcome, housekeeping (fire exits, first aid, breaks), Form H, pre-course work handed in; how the day and the assessments run	Presentation, discussion	Listening, questions, handing in pre-course work	Manual Ch. 1, register, Form H	Oral questioning on pre-course reading
09:20	LO1, LO2	What liquid-and-powder acrylic is, benefits and limits, comparison with other systems; nail anatomy; conditions that mean adapt, postpone or refuse, from the photographs	Taught session with images; questioning	Listening; identifying conditions from photographs; discussion of own clients	Manual Ch. 2 to 4, Figures 1 to 12	Direct questioning; identify three conditions and the action for each
10:15	LO3, LO4	Consultation, treatment planning and consent; chemistry, the mix ratio and set time, EMA and MMA, why acrylate allergy happens	Demonstration of a consultation; taught session; Figures 13 and	Paired consultation role play on Form A; reading beads	Manual Ch. 5 to 6, Forms A and B, one system	Completed Form A checked by tutor; learner identifies a wet,

			14 walk-through with beads on the brush			correct and dry bead
11:00	—	Break (15 minutes)				
11:15	LO5, LO6	Health, safety and hygiene; dust and vapour at the desk; UK legislation, insurance, data protection and advertising, as they apply to acrylic work	Taught session kept short and practical; SDS and COSHH assessment shown; extractor demonstrated	Reading an SDS; identifying controls at their own station; questions	Manual Ch. 8 to 10, Figure 19, SDS, COSHH assessment	Oral questioning; learner states three controls for their own station
11:50	LO7, LO8, LO9	Tutor demonstration: preparing the natural nail, fitting a tip and a form, the three beads and zones, checking from every angle, refining and finishing	Live demonstration on a model with commentary; learners at the desk	Observing; questions at each stage	Manual Ch. 7, 11 to 14, Figures 15 to 18 and 20 to 23, one system	Learners describe back the sequence before practice
12:45	—	Lunch (30 minutes)				
13:15	LO7, LO8, LO9	Supervised practice: preparation and a full set on the model (tips on one hand, forms on the other, or as agreed), refined and finished	Circulating, correcting at the desk, prompting the ratio check and the three views before every bead sets	Preparing, fitting tips and forms, building in zones, filing and finishing on the model	Workstations, systems, extraction, Forms A and C	Formative observation against A04; feedback at the desk
15:15	—	Break (15 minutes)				
15:30	LO10	Demonstration and practice: infill and rebalance on one nail; removal on one nail (bulk reduced, soaked, slid off)	Demonstration; supervised practice	Infill and rebalance on one nail; removal on one nail following the four stages	Manual Ch. 15, Figures 24 to 25, removal kit	Formative observation against A04
16:15	LO1 to LO10	Assessments: theory paper (60 minutes, in a quiet area, adjustments as agreed); practical observations completed where not already evidenced	Invigilating; observing; marking against A03 and A04	Theory paper; practical observation completed	A02, A03, A04	Summative: A02 marked, A04 completed and signed
17:15	LO10	Aftercare and troubleshooting; the case-study requirement and deadline; questions, feedback, evaluation forms; what happens next	Discussion; teach-back of aftercare in pairs	Giving aftercare in 60 seconds; completing the evaluation form; questions	Manual Ch. 16 to 20, evaluation and reflective practice forms	Teach-back checked by partner and tutor
17:30	—	Close				

Post-course (approximately 9 hours)

Three complete acrylic services on three different clients or models (at least one full set on tips or forms and at least one infill and rebalance), each with consultation (Form A), treatment record (Form C), photographs from above, the side and the barrel where separate consent is held (Form B), product record (Form G), aftercare and reflection, logged on Form D and submitted within eight weeks of the taught day. The tutor reviews each case study and records Satisfactory or Further evidence required; support by phone, message or email throughout. The CPD certificate is issued when the theory paper, the practical observation and all three case studies are satisfactory.

Evaluation and review

Learners complete the evaluation form at the end of the day and the reflective practice form with their case studies. The tutor reviews the lesson plan after each cohort and at the annual document review, and whenever a product, legal requirement or assessor comment changes.
